

The AMANDA™ Extension for Geocortex Essentials

Web Map Integration Enhances Business Process Automation

AMANDA, a web-based platform developed by CSDC Enterprise Solutions, is widely used by local, county, state and provincial government agencies to automate business processes related to licensing, permitting, planning, compliance, and court justice.

The optional AMANDA Extension for Geocortex Essentials provides a bi-directional link between the Geocortex Viewer for Silverlight and AMANDA, making it possible for data to be shared between the two platforms and adding many useful GIS capabilities to AMANDA.

The integration of AMANDA and Geocortex provides the ability to streamline workflows and help users make better, more informed decisions. Consider, for example, the process related to an application to build a new residential home. A municipal department that is reviewing the application for a building permit would be able to view the parcel information in AMANDA for the proposed lot displayed on a web map by the Geocortex Viewer for Silverlight. Having the context of the spatial information available as part of the workflow provides a very useful context for decision-making, and also helps expedite the process considerably.

The Geocortex Viewer for Silverlight adds web mapping capabilities to AMANDA

Integration

The integration between Geocortex and AMANDA occurs through the AMANDA GIS Adaptor Interface.

From AMANDA you can:

- Open the Geocortex Viewer for Silverlight from the Property and Folder windows
- Open the Geocortex Viewer for Silverlight from the AMANDA Toolbar
- Show a property in a map from the AMANDA Property window
- Show a property in a map from the AMANDA Folder window
- Perform a neighborhood buffer search

From the Geocortex Viewer for Silverlight, you can:

- Open the AMANDA Folders window
- Open the AMANDA People window
- Display properties from a map in the AMANDA Properties window
- Create a new folder in AMANDA
- Create a new property in AMANDA

Interface Elements: The AMANDA Toolbar Tab

When the extension is deployed, the AMANDA tab is added to the Geocortex Viewer for Silverlight toolbar and provides direct access to features that interact with AMANDA. The tools in this tab are grouped into these two sections:

Show data from AMANDA

Provide tools to view Properties, People, and Folders in AMANDA

Create new data in AMANDA

Create Folders and Properties in AMANDA

The AMANDA tab of the toolbar in the Geocortex Viewer for Silverlight

Licensing

The AMANDA Extension for Geocortex Essentials is licensed as an optional Full Geocortex Extension for use with Geocortex Essentials 3.14 and Geocortex Viewer for Silverlight 1.9.2 (and higher versions).

AMANDA version 6, including the AMANDA GIS Adaptor, is required.

Updates are provided (optionally) on an ongoing basis under the same annual maintenance model we offer for core Geocortex Essentials licensees. For more information, contact your Geocortex account manager, or if your account is handled by an authorized Geocortex Reseller, please contact your local representative.
